

Independent Learning Guidance for Parents

Department: D&T

Year Group: 10&11

Date published: September 2012

Why is independent learning in D&T important?

Independent Learning in Key Stage 4 allows pupils to reinforce their understanding of a number of key topics associated with Design and Technology. This encourages them to appreciate the impact that Design and Technology has on the wider world and understand how designers and technologists have a responsibility to be sensitive to the needs of a range of people in society and the impact on the environment of their designs.

Pupils are also expected to investigate specific Design and Technology processes in greater detail and depth e.g. The design process, plastics processing, design innovations etc.

How will independent learning be set?

- Independent work will be set at least once a week in each subject area of Design and Technology. In some D+T areas two shorter tasks may be set depending on the topic being studied.
 - Independent work should be submitted on A4 or A3 (when appropriate) paper.
 - Independent will follow one of the themes below relating to GCSE courses in Resistant Materials, Graphic Products/Product Design, Textiles, Food Technology/Catering & Hospitality and may include practise examination questions.
1. Materials and Components
 2. Design and Market Influences
 3. Creativity in D+T
 4. Sustainability
 5. Health and Safety
 6. Tools and Equipment
 7. Techniques and Processes
 8. Systems and Control

What expectations do staff have of the work being completed?

- Staff will expect all independent work to be completed by the given deadline. In the majority of cases pupils will be allowed one week to complete their D+T homework. The work should be presented neatly in the format expected by the class teacher. Either A4 or A3 (when appropriate) paper should be used.
- If a problem arises which means independent work is not completed, a note from parents should be submitted.
- It should be attempted on the night that it is set so that help can be sought if needed before the due date.
- Help from parents may be sought but the task should be completed by the pupil in order to gauge a realistic picture of the pupil's level and ability and to encourage independent learning.
- Pupils are encouraged to use ICT to complete independent work and facilities in school are available for them to use during break and lunchtimes. However, pupils may still complete their independent work by hand as long as they take care with the overall quality and presentation of material. They should always strive to complete their work as neatly as possible and to ensure that they maintain a high standard of presentation as this is very important in a 'visual' subject such as Design and Technology.

What help and support is available?

- Pupils will be able to access the school network from home via FRONTER or they can use the ICT facilities in break or lunchtimes.
- The school library has a number of text books relating to Designing and Technology that may be helpful.
- Teachers are available to answer any questions relating to independent work during lessons, break and lunchtimes.
- Homework Club runs during lunchtimes in the Learning Support Room where Teaching Assistants can help with any independent work.

What work can be completed in addition to the set tasks?

Pupils are encouraged to take a wider interest in the way Design and Technology is used in everyday life. Many children have access to a broad range of products that have been designed and manufactured that help them do work or to entertain them during their leisure time.

Pupils studying a Design and Technology subject should practise sketching to improve their drawing and communication skills.

Pupils need to explore interests that will increase their knowledge and understanding of topics in their chosen area of Design and Technology.

Pupils can also look at a number of websites that will increase their awareness of Design and Technology.
